

Cloud Infrastructure Report

Q4 2025

This report provides a comprehensive view of FinVault Inc.'s multi-cloud infrastructure as of December 2025. It is intended for the CFO, CTO, and Cloud Engineering leadership. All figures are in USD.

Company Overview

Company: FinVault Inc.

Indus

Cloud Spend Summary

FinVault operates a multi-cloud architecture spanning Amazon Web Services (primary), Microsoft Azure (compliance and analytics), and Google Cloud Platform (data infrastructure). Total monthly cloud expenditure for Q4 2025 is \$71,500, representing an annualised spend of \$858,000. Cloud costs have grown 34% year-over-year, driven by LATAM expansion and the addition of the ML Risk Scoring Engine in Sydney.

MONTHLY SPEND	ANNUAL SPEND	YOY GROWTH	WORKLOADS
\$71,500	\$858,000	+34%	14
Q4 2025 average	annualised	vs Q4 2024	across 3 providers

Spend by Cloud Provider

Provider	Workloads	Monthly Spend	% of Total	Primary Use
AWS	9	\$47,600	66.6%	Core payments, security, CX
Azure	4	\$17,300	24.2%	Compliance, analytics, BI
GCP	1	\$5,600	7.8%	Data lake, BigQuery
TOTAL	14	\$71,500	100%	

Department Spend Breakdown

Department	Workloads	Monthly Cost	Key Regions
------------	-----------	--------------	-------------

Core Payments	4	\$26,800	Tokyo, Sydney, Sao Paulo, Mumbai
Security & Compliance	3	\$10,200	Sydney, Hong Kong, Netherlands
Customer Experience	3	\$7,800	Tokyo, Frankfurt, Sao Paulo
Data & Analytics	3	\$16,900	Brazil South, Taiwan
ML & Risk	1	\$9,800	Sydney

Regional Cost Concentration

FinVault's cloud spend is concentrated in a small number of high-cost regions. Three AWS regions account for over 60% of total spend: Sydney (ap-southeast-2) hosts the Transaction Processor and ML Risk Engine; Tokyo (ap-northeast-1) hosts the Payment Gateway; and both Azure Brazil South workloads (Analytics Data Warehouse and Reporting Dashboard) together represent \$11,300/month.

Sydney is a concern: as of Q4 2025, the region is experiencing elevated seismic activity and infrastructure incidents. The Transaction Processor (\$12,000/mo), ML Risk Scoring Engine (\$9,800/mo), and Fraud Detection API (\$4,200/mo) are all co-located in ap-southeast-2, creating a \$26,000/month single-region concentration risk.

Year-Over-Year Cloud Cost Trend

Period	Monthly Spend	YoY Change	Primary Driver
Q4 2023	\$53,200	--	Base infrastructure
Q2 2024	\$59,800	+12.4%	LATAM expansion, Sao Paulo region
Q4 2024	\$63,400	+6.0%	India Payments Service added
Q2 2025	\$68,100	+7.4%	Analytics Data Warehouse scaling
Q4 2025	\$71,500	+5.0%	ML Risk Engine GPU upgrade

Cost Optimisation Opportunities Identified

The Cloud Engineering team has identified several cost reduction opportunities in Q4 2025. A formal cloud cost audit has not been conducted since 2023. Preliminary analysis suggests 15-25% of current spend may be recoverable through region consolidation, instance right-sizing, and provider renegotiation. An RFP for cloud cost management tooling is planned for Q1 2026.

Forecast

At the current growth trajectory (+5-7% per quarter), cloud spend is projected to reach \$78,000-\$82,000/month by Q4 2026, representing an annualised cost of \$936,000-\$984,000. Without active cost optimisation, cloud as a percentage of revenue will increase from the current 12.6% to an estimated 14-15% by end of 2026. The CFO has flagged this as a priority initiative for the 2026 budget cycle.

Recommended: immediate cloud cost audit, targeted at the Sydney concentration (potential \$3-5M/year SLA and cost

risk), idle instance identification (estimated \$800k-\$1.2M annual waste), and provider consolidation review.
